

# INDIGOBLUE CONSULTING

LEADERS IN AGILE BUSINESS CHANGE

**Formed in 2002, IndigoBlue** enables organisations to successfully deliver change. We work with our customers to develop strategies that exploit the value of existing revenue streams and create new business opportunities through the appropriate use of technology, and we ensure successful, low-risk, controlled implementation.

Our services are underpinned by our unrivalled expertise in Agile. We are committed to incremental delivery of value, the highest levels of quality and continuous collaboration.

Our services reach across the enterprise from strategy through to programme delivery, ensuring the successful, controlled adoption of change. Our services are:

- Strategic Change
- Agile Adoption
- Agile Programme Delivery

## Strategic Change

IT strategy is not confined to infrastructure and hardware. Online business strategy should not be confined to marketing. The world has changed and will continue to change. All organisations are dependent upon technology to drive business value, and participation in the e-business revolution is no longer optional. Organisations who embrace the new world will grow and succeed, those that do not will fail.

Utilising senior IT professionals with a wealth of experience in large and small organisations we are able to work with our customers to develop the most appropriate strategy to align IT with the needs of the business. We draw on our expertise in Agile to develop low-risk, incremental change plans and working at the forefront of technology, we identify trends that will help your business to exploit new opportunities.

## Agile Adoption

Software delivery processes have evolved and improved beyond recognition during the last decade. Organisations who have embraced the change have realised significant improvements in speed to market, quality, fit, and ultimately in customer and stakeholder satisfaction. Those organisations that remain entrenched in waterfall methodologies with out-dated development and testing practices are failing their business.

IndigoBlue works with our customers to build world class IT delivery capability. We enable organisations to embrace the latest Agile thinking to revolutionise every aspect of IT from strategy and annual planning through business engagement and implementation to release management.

Our approach has been developed over 10 years and is proven to deliver immediate benefit and rapidly achieve long-term organisational sustainability. This will typically require two streams of work: the first focussed on development of staff skills, knowledge and understanding; the second aimed at successfully delivering Agile projects.

## Agile Programme Delivery

Agile delivery offers substantial benefit when delivering change programmes. Regular incremental deployment ensures early return on investment, lowers risk and significantly reduces the level of investment locked within the programme.

However, embarking on any large programme carries inherent risk. IndigoBlue can mitigate this risk through the deployment of experienced Agile experts working to proven processes and governance standards.

Working with our customers from business planning through to final deployment we develop incremental, objectives-based strategies and plans; identify enabling technologies; support the engagement of third parties for delivery; apply appropriate governance and provide Programme Management and other senior programme roles.
